No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | SIDS2/gcgdata/geneseq/geneseqp_embl/AA1982_DAT: |

                                                                            The present sequence is human caspase recruitment domain-14 (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bcl-10 and stimulates phosphorylation of Bcl-10 or activation of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for regulating growth and cell death and useful for the treatment of cancer. It is also useful for the treatment of cancer. It is also useful for the treatment of autoimmune disorders (e.g., systemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders (e.g., anaemia, myelodysplastic syndromes), myocardial infarctions, strokes, immune disorders (e.g., Crobn's disease, allergic rhinitis), cell signalling disorders and certain viral and bacterial infections.
regulating growth and cell death and useful for the treatment of cancer

                                                                                       The present sequence is predicted human caspase recruitment domain-14 (CARD-14). The CARD-14 gene is located on chromosome 17. The CARD-14 is used for the detection of modulators that modulates the ability of CARD-14 to bind to Bol-10 and stimulates phosphorylation of Bol-10 or activation of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for activation of nuclear factor-kappa B (NF-kB). The CARD-14 is useful for It is also useful for the treatment of autoimmune disorders (e.g., aystemic lupus erythematosus), neurological disorders e.g., Alzheimer's and Parkinson's disease, inflammatory disorders, haematological disorders (e.g., amemaia, myelodysplastic syndromes), myocardial infarctions, strokes, immune disorders (e.g., Crohn's disease, allergic rhinitis), cell signalling disorders and certain viral and bacterial infections.
An isolated caspase recruitment domain polypeptide useful for regulating growth and cell death and useful for the treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Domain
```

```
The present sequence represents novel human caspase recruitment
domain, CARD-11. The polynucleotide encoding this sequence was
isolated from a human T-cell DONA library. Also described are
novel human sequences for CARD-9 and CARD-10 (AAU01205, AAU01206)
and rat CARD-9 (AAU01204). CARD-9, CARD-10 and CARD-11 interact
with Bol-10 which is thought to activate nuclear factor (NF) kappaB
cond apoptosis. The sequences of the invention can be used for
treating a disorder associated with abnormal levels of apoptosis by
modulating the expression or activity of CARD-9, CARD-10, or CARD-11.
They can be used for the treatment of hyperproliferative disorders
(e.g. cancer), autoimmune disorders (e.g. systemic lupus erythematosus),
neurological disorders (e.g. Alzheimer's disease), inflammatory disorders
(e.g. cronn's disease), and viral infection (e.g. HIV). The CARD
polypeptide, polynucleotide and an antibody which selectively binds to
CARD can be used in screening and detection assays (e.g. chromosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel caspase recruitment domain (CARD) proteins, CARD-9, CARD-10, CARD-11, useful as targets for therapy, as immunogens, and in screening

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                  The
mapping, tissue typing), predictive medicine (prognostic assays, monitoring clinical trials, and therapy, treatment and prophylaxis). The Modulate it. CARD polypeptide may be used to screen for drugs that bind to and/or modulate it. CARD sequences are potential targets for regulating inflammation. cancer, NF *RappaB signalling, stress related response and apoptosis in human disease. A host cell containing a polynucleotide encoding CARD can be used to create transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | : || || || :| | || :| || 1 || :| || 1 || :| || || || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1 || 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Brosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16 ISVIGGNLTGIFIHRVTPGSAADQMALRPGTQIVMVDYEASEPLFKAVLEDTTLEEAVGL 75

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to stomach cancer-expressed genes (AAI93842-AAI93917) and the encoded proteins (AAM93967-AAM94039). The genes can be used as markers in blood tests for screening for the early stages of the disease. The proteins and peptides can be used as targets for screening for compounds to treat the disease. They can also be used for predicting micro-metastases. The gene can predict peritoneal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Stomach cancer-associated genes, useful as markers in blood tests
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; primer; detection; diagnosis; antisense therapy; gene therapy

                                                                                                                                                                                                                                                                                                   Domain
                                                                                                                                                                                                                                                                                                                               Jomain
                                                                                                                                                                                                                                                                                                                                                          Domain
                                                                                                                                                                             Кеу
 polynucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence, at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length converse are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length converse are also useful for the cDNAs asily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13642 represent human cDNA sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a

The present invention relates to human kinases (PKIN) and polynucleotides encoding such proteins. PKIN sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               expression of PKIN, particularly immune system disorders (e.g. acquired immune deficiency syndrome (AIDS), thymic hypoplasia, Crohn's disease, anaemia, asthma), neurological disorders (e.g. epilepsy, Charcor.Marie-Tooth disease or seizures), call proliferative disorders (e.g. cancers such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma), and developmental disorders (e.g. Down's syndrome). They are also used in gene therapy and protein therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                               New human kinases, useful for diagnosing, treating or preventing immune system disorders (e.g. Crohn's disease), neurological disorders (e.g. epilepsy), or cell proliferative disorders (e.g. cancers such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a fock supplement. (II) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cappositics, forensics, gene mapping, identification of mutations in the printed diagnostics amino acid sequences of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human novel polynucleotides and associated polypeptides. The polynucleotides and polypeptides are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses and cancer and for promoting wound healing. The sequences are used to brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, sarkinson's disease and amyotrophic lateral sclerosis. The sequences are involved in chemotactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid

              regeneration of bone, cartilage, tendon, ligament and/or never tissue growth, tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritis, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmuno disorders e.g. multiple sclerosis and myasthenia quavis, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABG66666-ABG66758 represent human novel polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsorlatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunostimulant; thrombolytic; cogqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antirheumatic; antithyroid;

                                                                                               AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthitic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; antifungal; antirheumatic; antithyroid; and antibacterial; antiviral; antifungal; antirheumatic; antithyroid; confishosition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The proteins and nucleic acids may be used to treat capress.
                                                                                                                                                                                                                                                                                                                        proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antinfiammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thomas G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                            The present sequence is the protein sequence of human betal-syntrophin. It is described with reference to the methods of the invention, which involve the identification of compounds which are able to modulate the interaction between PDZ domains (also known as DHF or GLGF domains) and protein kinases. The invention also comprises peptide fragments derived from stress-activated protein kinases which are involved in protein phosphorylation. The compounds and peptides can be used in the treatment of muscular diseases, for example muscular dystrophy, or in cases where modulation of phosphorylation of proteins with PDZ domains or modulation of signalling via activin receptors or voltage gated channels is necessary, or in instances where the localisation of SARK3 at the neuromuscular junction or sarcolemma needs to be disrupted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the protein sequence of human beta2-syntrophin. It is described with reference to the methods of the invention, which involve the identification of compounds which are able to modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel methods for identifying compounds useful for treating muscular dystrophy comprising identifying modulators of protein kinase and {

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been stolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

                                                                                                                                                                                                                                     ë,
interaction between PDZ domains (also known as DHF or GLGF domains) and protein kinases. The invention also comprises peptide fragments derived from stress-activated protein kinases which are involved in protein phosphorylation. The compounds and peptides can be used in the treatment of muscular diseases, for example muscular dystrophy, or in cases where medulation of phosphorylation of proteins with PDZ domains or modulation of signalling via activin receptors or voltage gated channels is necessary, or in instances where the localisation of SAPK3 at the neuromuscular junction or sarcolemma needs to be disrupted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          830 Primers useful for synthesizing full length cDNA clones and their

GENERAL INFORMATION:

APPLICANT: Bartel, Paul L.

APPLICANT: Tavtigian, Sean V.

TITLE OF INVENTION: MASC2- An MMAC1 Interacting Protein

FILE REFERENCE: MASC2

CURRENT APPLICATION NUMBER: US/09/306,998

CURRENT FILING DATE: 1999-05-07

EARLIER APPLICATION NUMBER: US 60/084,740

EARLIER FILING DATE: 1998-05-08

NUMBER OF SEQ ID NOS: 72

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 3

Patent No. 6204055
GENERAL INFORMATION:
APPLICANT: Dean, Nicholas M.
APPLICANT: Dean, Nicholas M.
APPLICANT: Marcusson, Eric G.
TITLE OF INVENTION: Antisense Compound Modulation of Fas Mediated Signaling
FILE REFERENCE: ISPH-0351
CURRENT APPLICATION NUMBER: US/09/290,640
CURRENT FILING DATE: 1999-04-12
                                                                                                                                                                                                                          PRIMARY STRUCTURE AND FUNCTIONAL
